PROFESSIONAL SUMMARY

Aspiring Software Engineer with a foundation in AI/ML and hands-on experience building innovative applications. Currently working on a major project focused on secure real time chat application with steganography and screen sharing. Skilled in Python, SQL, R, C and front-end technologies and experienced in using data visualization tools such as Tableau, Excel and Power BI to present insights effectively.

EDUCATION

B.E. Computer Science and Engineering (Data Science)- ATME College of Engineering (2022-2026) CGPA: 7.3/10

PROJECTS

1. Shopify Sales Dashboard- Power BI

- Created an interactive dashboard analyzing sales performance, customer trends, and product profitability.
- Enhanced decision-making through data visualization and KPIs.
- Tools: Power BI, SQL, Excel.

2. Pet Website

- A full-stack website for pet lovers to explore and adopt pets.
- Built a responsive pet-themed website using HTML and CSS to highlight content related to pet care and adoption.
- Currently enhancing the design with Figma and learning deployment via GitHub Pages to host the project online.

3. Fake Social Media Account Detection

- Developed a fake-account detection system for social media by analysing user profile data, behavioural patterns, and network metrics to accurately classify fake vs genuine accounts.

- Implemented a complete detection pipeline covering data collection, preprocessing, feature extraction, decision-rule modelling, and reporting actions to improve platform security and reduce misinformation spread.
- Utilized JavaScript and system-level tools across Windows/Linux environments to build the detection interface, supported by multi-core CPUs, high-performance GPUs, and data-driven rule-based logic for account classification.

4. Secure Real Time Chat Application with Steganography and screen sharing

- Developed a secure real-time chat application using the MERN stack with instant messaging powered by Socket.IO and cloud-based media handling.
- Implemented dual-layer security using AES encryption and LSB image steganography to enable covert and confidential communication.
- Integrated WebRTC-based screen sharing and optimized performance through asynchronous processing and message queues to ensure a smooth user experience.

TECHNICAL SKILLS

- Programming Languages: Python, C, R (Basics)
- Libraries: TensorFlow, NumPy, Pandas, OpenCV
- Web Technologies: HTML, CSS
- Databases: MySQL, MongoDB
- Tools: Git, VS Code
- Data Visualization: Tableau, Power BI, Matplotlib, Seaborn
- Data & AI/ML(Basics): Data Science, NLP, AI/MLConcepts.
- Soft Skills: Communication Skills, Problem-Solving, Decision Making, Continous Learning.

CERTIFICATIONS

- Introduction to Python – Infosys Springboard
- Domain Specific Training – IVS Lab

  -Prompt Engineer- Phase 1

  -Prompt Engineer- Phase 2

INVOLVEMENT

- Core Member of Data Science Technical Club – Datanauts
- Volunteer in 'School Survey Program' organized by YOUTH FOR SEVA.

- Organized a Inter-College Technical event ‘IDEATHON & TECH TATTVA 2025’ from Datanauts Club, Dept. of CSE (Data Science).
